Accessibility

These checks highlight opportunities to [improve the accessibility of your web app](#). Only a subset of accessibility issues can be automatically detected so manual testing is also encouraged.

Names and labels — These are opportunities to improve the semantics of the controls in your application. This may enhance the experience for users of assistive technology, like a screen reader.

⚠ Buttons do not have an accessible name ^

When a button doesn't have an accessible name, screen readers announce it as "button", making it unusable for users who rely on screen readers. [Learn more](#).

Failing Elements

```
button
<button onclick="openNav();" class="mmdropbtn">

button.uk-button.uk-button-large.bw-icon
```

⚠ <frame> or <iframe> elements do not have a title ^

Screen reader users rely on frame titles to describe the contents of frames. [Learn more](#).

Failing Elements

```
iframe#IframeFooter

iframe#soc-widget
```

⚠ Links do not have a discernible name ^

Link text (and alternate text for images, when used as links) that is discernible, unique, and focusable improves the navigation experience for screen reader users. [Learn more](#).

Failing Elements

```
a  
<a href="http://www.huddersfield.su">
```

Contrast — These are opportunities to improve the legibility of your content.

▲ Background and foreground colors do not have a sufficient contrast ratio.

Low-contrast text is difficult or impossible for many users to read. [Learn more.](#)

Best practices — These items highlight common accessibility best practices.

▲ [user-scalable="no"] is used in the `<meta name="viewport">` element or the [maximum-scale] attribute is less than 5.

8

Disabling zooming is problematic for users with low vision who rely on screen magnification to properly see the contents of a web page. [Learn more](#).

Failing Elements

meta

Additional items to manually check (10) — These items address areas which an automated testing tool cannot cover. Learn more in our guide on [conducting an accessibility review](#).

The page has a logical tab order

Tabbing through the page follows the visual layout. Users cannot focus elements that are offscreen. [Learn more.](#)

Interactive controls are keyboard focusable

Custom interactive controls are keyboard focusable and display a focus indicator. [Learn more.](#)

Interactive elements indicate their purpose and state

Interactive elements, such as links and buttons, should indicate their state and be distinguishable from non-interactive elements. [Learn more.](#)

The user's focus is directed to new content added to the page

If new content, such as a dialog, is added to the page, the user's focus is directed to it. [Learn more.](#)

User focus is not accidentally trapped in a region

A user can tab into and out of any control or region without accidentally trapping their focus. [Learn more.](#)

Custom controls have associated labels

Custom interactive controls have associated labels, provided by aria-label or aria-labelledby. [Learn more.](#)

Custom controls have ARIA roles

Custom interactive controls have appropriate ARIA roles. [Learn more.](#)

Visual order on the page follows DOM order

DOM order matches the visual order, improving navigation for assistive technology. [Learn more.](#)

Offscreen content is hidden from assistive technology

Offscreen content is hidden with display: none or aria-hidden=true. [Learn more.](#)

HTML5 landmark elements are used to improve navigation

Landmark elements (<main>, <nav>, etc.) are used to improve the keyboard navigation of the page for assistive technology. [Learn more.](#)

Passed audits (18)

[\[aria-*\]](#) attributes match their roles

Each ARIA `role` supports a specific subset of `aria-*` attributes. Mismatching these invalidates the `aria-*` attributes. [Learn more.](#)

[\[aria-hidden="true"\]](#) is not present on the document <body>

Assistive technologies, like screen readers, work inconsistently when `aria-hidden="true"` is set on the document `<body>`. [Learn more.](#)

[\[aria-hidden="true"\]](#) elements do not contain focusable descendants

Focusable descendants within an `[aria-hidden="true"]` element prevent those interactive elements from being available to users of assistive technologies like screen readers. [Learn more.](#)

[\[role\]](#)s have all required [\[aria-*\]](#) attributes

Some ARIA roles have required attributes that describe the state of the element to screen readers. [Learn more.](#)

Elements with an ARIA [\[role\]](#) that require children to contain a specific [\[role\]](#) have all required children.

Some ARIA parent roles must contain specific child roles to perform their intended accessibility functions. [Learn more](#).

[**role**]s are contained by their required parent element ^

Some ARIA child roles must be contained by specific parent roles to properly perform their intended accessibility functions. [Learn more](#).

[**role**] values are valid ^

ARIA roles must have valid values in order to perform their intended accessibility functions. [Learn more](#).

[**aria-***] attributes have valid values ^

Assistive technologies, like screen readers, can't interpret ARIA attributes with invalid values. [Learn more](#).

[**aria-***] attributes are valid and not misspelled ^

Assistive technologies, like screen readers, can't interpret ARIA attributes with invalid names. [Learn more](#).

The page contains a heading, skip link, or landmark region ^

Adding ways to bypass repetitive content lets keyboard users navigate the page more efficiently. [Learn more](#).

Document has a `<title>` element ^

The title gives screen reader users an overview of the page, and search engine users rely on it heavily to determine if a page is relevant to their search. [Learn more](#).

ARIA IDs are unique ^

The value of an ARIA ID must be unique to prevent other instances from being overlooked by assistive technologies. [Learn more](#).

Heading elements appear in a sequentially-descending order ^

Properly ordered headings that do not skip levels convey the semantic structure of the page, making it easier to navigate and understand when using assistive technologies. [Learn more](#).

`<html>` element has a [**lang**] attribute ^

If a page doesn't specify a lang attribute, a screen reader assumes that the page is in the default language that the user chose when setting up the screen reader. If the page isn't actually in the default language, then the screen reader might not announce the page's text correctly. [Learn more](#).

`<html>` element has a valid value for its [**lang**] attribute ^

Specifying a valid [BCP 47 language](#) helps screen readers announce text properly. [Learn more](#).

Image elements have [**alt**] attributes ^

Informative elements should aim for short, descriptive alternate text. Decorative elements can be ignored with an empty alt attribute. [Learn more](#).

Lists contain only `` elements and script supporting elements (`<script>` and `<template>`). ^

Screen readers have a specific way of announcing lists. Ensuring proper list structure aids screen reader output. [Learn more](#).

List items (``) are contained within `` or `` parent elements ^

Screen readers require list items (``) to be contained within a parent `` or `` to be announced properly. [Learn more.](#)

Not applicable (18)

[\[accesskey\]](#) values are unique

Access keys let users quickly focus a part of the page. For proper navigation, each access key must be unique. [Learn more.](#)

ARIA input fields have accessible names

When an input field doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. [Learn more.](#)

ARIA toggle fields have accessible names

When a toggle field doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. [Learn more.](#)

[<dl>](#)'s contain only properly-ordered [<dt>](#) and [<dd>](#) groups, [<script>](#), [<template>](#) or [<div>](#) elements.

When definition lists are not properly marked up, screen readers may produce confusing or inaccurate output. [Learn more.](#)

Definition list items are wrapped in [<dl>](#) elements

Definition list items (`<dt>` and `<dd>`) must be wrapped in a parent `<dl>` element to ensure that screen readers can properly announce them. [Learn more.](#)

[\[id\]](#) attributes on active, focusable elements are unique

All focusable elements must have a unique `id` to ensure that they're visible to assistive technologies. [Learn more.](#)

No form fields have multiple labels

Form fields with multiple labels can be confusingly announced by assistive technologies like screen readers which use either the first, the last, or all of the labels. [Learn more.](#)

[<input type="image">](#) elements have [\[alt\]](#) text

When an image is being used as an `<input>` button, providing alternative text can help screen reader users understand the purpose of the button. [Learn more.](#)

Form elements have associated labels

Labels ensure that form controls are announced properly by assistive technologies, like screen readers. [Learn more.](#)

Presentational [<table>](#) elements avoid using [<th>](#), [<caption>](#) or the [\[summary\]](#) attribute.

A table being used for layout purposes should not include data elements, such as the th or caption elements or the summary attribute, because this can create a confusing experience for screen reader users. [Learn more.](#)

The document does not use [<meta http-equiv="refresh">](#)

Users do not expect a page to refresh automatically, and doing so will move focus back to the top of the page. This may create a frustrating or confusing experience. [Learn more.](#)

[<object>](#) elements have [\[alt\]](#) text

Screen readers cannot translate non-text content. Adding alt text to `<object>` elements helps screen readers convey meaning to users. [Learn more.](#)

No element has a [tabindex] value greater than 0 ^

A value greater than 0 implies an explicit navigation ordering. Although technically valid, this often creates frustrating experiences for users who rely on assistive technologies. [Learn more.](#)

Cells in a <table> element that use the [headers] attribute refer to table cells within the same table. ^

Screen readers have features to make navigating tables easier. Ensuring `<td>` cells using the `[headers]` attribute only refer to other cells in the same table may improve the experience for screen reader users. [Learn more.](#)

<th> elements and elements with [role="columnheader"/"rowheader"] have data cells they describe. ^

Screen readers have features to make navigating tables easier. Ensuring table headers always refer to some set of cells may improve the experience for screen reader users. [Learn more.](#)

[lang] attributes have a valid value ^

Specifying a valid [BCP 47 language](#) on elements helps ensure that text is pronounced correctly by a screen reader. [Learn more.](#)

<video> elements contain a <track> element with [kind="captions"] ^

When a video provides a caption it is easier for deaf and hearing impaired users to access its information. [Learn more.](#)

<video> elements contain a <track> element with [kind="description"] ^

Audio descriptions provide relevant information for videos that dialogue cannot, such as facial expressions and scenes. [Learn more.](#)

Best Practices

Trust and Safety

⚠ Links to cross-origin destinations are unsafe ^

Add `rel="noopener"` or `rel="noreferrer"` to any external links to improve performance and prevent security vulnerabilities. [Learn more.](#)

▲ Includes front-end JavaScript libraries with known security vulnerabilities — 8 vulnerabilities detected ^

Some third-party scripts may contain known security vulnerabilities that are easily identified and exploited by attackers. [Learn more.](#)

Library Version	Vulnerability Count	Highest Severity
Highcharts@6.0.7	2	High
jQuery@3.2.1	3	Medium
Moment.js@2.9.0	3	Medium

General

▲ Registers an `unload` listener ^

The `unload` event does not fire reliably and listening for it can prevent browser optimizations like the Back-Forward Cache. Consider using the `pagehide` or `visibilitychange` events instead. [Learn More](#)

Description

URL	Description
https://www.huddersfield.su	
https://www.huddersfield.su	
/hudsu/signin.html (www.huddersfieldstudent.com)	Blocked autofocusing on a <input> element in a cross-origin subframe.
/hudsu/signin.html (www.huddersfieldstudent.com)	Blocked autofocusing on a <input> element in a cross-origin subframe.
...js/uikit.min.js (cdnjs.cloudflare.com)	Blocked autofocusing on a <input> element in a cross-origin subframe.

▲ Missing source maps for large first-party JavaScript

Source maps translate minified code to the original source code. This helps developers debug in production. In addition, Lighthouse is able to provide further insights. Consider deploying source maps to take advantage of these benefits. [Learn more.](#)

Passed audits (11)

Uses HTTPS

All sites should be protected with HTTPS, even ones that don't handle sensitive data. This includes avoiding [mixed content](#), where some resources are loaded over HTTP despite the initial request being served over HTTPS. HTTPS prevents intruders from tampering with or passively listening in on the communications between your app and your users, and is a prerequisite for HTTP/2 and many new web platform APIs. [Learn more.](#)

Avoids requesting the geolocation permission on page load

Users are mistrustful of or confused by sites that request their location without context. Consider tying the request to a user action instead. [Learn more.](#)

Avoids requesting the notification permission on page load

Users are mistrustful of or confused by sites that request to send notifications without context. Consider tying the request to user gestures instead. [Learn more.](#)

Allows users to paste into password fields

Preventing password pasting undermines good security policy. [Learn more.](#)

Displays images with correct aspect ratio

Image display dimensions should match natural aspect ratio. [Learn more.](#)

Serves images with appropriate resolution ^

Image natural dimensions should be proportional to the display size and the pixel ratio to maximize image clarity. [Learn more.](#)

Page has the HTML doctype ^

Specifying a doctype prevents the browser from switching to quirks-mode. [Learn more.](#)

Properly defines charset ^

A character encoding declaration is required. It can be done with a `<meta>` tag in the first 1024 bytes of the HTML or in the Content-Type HTTP response header. [Learn more.](#)

Avoids Application Cache ^

Application Cache is deprecated. [Learn more.](#)

Detected JavaScript libraries ^

All front-end JavaScript libraries detected on the page. [Learn more.](#)

Name	Version
Highcharts	6.0.7
jQuery	3.2.1
jQuery UI	1.12.1
Moment.js	2.9.0
core-js	core-js-pure@3.0.0

Avoids deprecated APIs ^

Deprecated APIs will eventually be removed from the browser. [Learn more.](#)

Not applicable (1) ^

Fonts with `font-display: optional` are preloaded ^

Preload `optional` fonts so first-time visitors may use them. [Learn More](#)

Progressive Web App

These checks validate the aspects of a Progressive Web App. [Learn more.](#)

Fast and reliable

- Page load is not fast enough on mobile networks
- ▲ Your page loads too slowly and is not interactive within 10 seconds. Look at the opportunities and diagnostics in the "Performance" section to learn how to improve.
 - Interactive at 43.0 s
- A fast page load over a cellular network ensures a good mobile user experience. [Learn more.](#)
-
- ▲ Current page does not respond with a 200 when offline
- If you're building a Progressive Web App, consider using a service worker so that your app can work offline. [Learn more.](#)
-
- ▲ `start_url` does not respond with a 200 when offline **No usable web app manifest found on page.**
- A service worker enables your web app to be reliable in unpredictable network conditions. [Learn more.](#)
-
- ## Installable
- Uses HTTPS
- All sites should be protected with HTTPS, even ones that don't handle sensitive data. This includes avoiding [mixed content](#), where some resources are loaded over HTTP despite the initial request being served over HTTPS. HTTPS prevents intruders from tampering with or passively listening in on the communications between your app and your users, and is a prerequisite for HTTP/2 and many new web platform APIs. [Learn more.](#)
-
- ▲ Does not register a service worker that controls page and `start_url`
- The service worker is the technology that enables your app to use many Progressive Web App features, such as offline, add to homescreen, and push notifications. [Learn more.](#)
-
- ▲ Web app manifest does not meet the installability requirements **Failures: No manifest was fetched.**
- Browsers can proactively prompt users to add your app to their homescreen, which can lead to higher engagement. [Learn more.](#)
-
- ## PWA Optimized
- Redirects HTTP traffic to HTTPS
- If you've already set up HTTPS, make sure that you redirect all HTTP traffic to HTTPS in order to enable secure web features for all your users. [Learn more.](#)
-
- ▲ Is not configured for a custom splash screen **Failures: No manifest was fetched.**
- A themed splash screen ensures a high-quality experience when users launch your app from their homescreens. [Learn more.](#)
-
- ▲ Does not set a theme color for the address bar.
- Failures: No manifest was fetched, No `<meta name="theme-color">` tag found.**
- The browser address bar can be themed to match your site. [Learn more.](#)
-
- Content is sized correctly for the viewport
- If the width of your app's content doesn't match the width of the viewport, your app might not be optimized for mobile screens. [Learn more.](#)
-
- Has a `<meta name="viewport">` tag with `width` or `initial-scale`

Add a `<meta name="viewport">` tag to optimize your app for mobile screens. [Learn more.](#)

Contains some content when JavaScript is not available ^

Your app should display some content when JavaScript is disabled, even if it's just a warning to the user that JavaScript is required to use the app. [Learn more.](#)

Provides a valid `apple-touch-icon` ^

For ideal appearance on iOS when users add a progressive web app to the home screen, define an `apple-touch-icon`. It must point to a non-transparent 192px (or 180px) square PNG. [Learn More.](#)

▲ Manifest doesn't have a maskable icon [No manifest was fetched](#) ^

A maskable icon ensures that the image fills the entire shape without being letterboxed when installing the app on a device. [Learn more.](#)

Additional items to manually check (3) — These checks are required by the baseline [PWA Checklist](#) but are not automatically checked by Lighthouse. They do not affect your score but it's important that you verify them manually. ^

Site works cross-browser ^

To reach the most number of users, sites should work across every major browser. [Learn more.](#)

Page transitions don't feel like they block on the network ^

Transitions should feel snappy as you tap around, even on a slow network. This experience is key to a user's perception of performance. [Learn more.](#)

Each page has a URL ^

Ensure individual pages are deep linkable via URL and that URLs are unique for the purpose of shareability on social media. [Learn more.](#)
